- Build an Online Bank with Java, Angular 2, Spring([Link](#))

PROJECTS

> i-life

Responsibilities:

- Developed RESTful APIs using Spring Boot.
- Integrated third-party APIs, specifically the Porichoy NID Server, into the system.
- Implemented new business ideas to enhance the company's offerings.
- Customized error handling to ensure robust and user-friendly applications.

> General Insurance

Responsibilities:

- Developed RESTful APIs using Spring Boot to facilitate efficient communication between various components of the system.
- Built Continuous Integration and Continuous Deployment (CI/CD) pipelines using Jenkins to automate the build, test, and deployment processes.
- Integrated Eureka server for service discovery and registration within the microservices architecture.
- Dockerized applications to package them into containers for easy deployment and management.
- Deployed Dockerized applications into Kubernetes (Minikube) to orchestrate and manage containerized applications.
- Integrated Spring Cloud API Gateway to manage and secure API traffic.
- Implemented interservice communication within different modules to ensure seamless interaction between microservices.
